

OPPOSE House Bill 140

HB 140 is a threat to children's health

Dr. Cretella, Executive Director of the American College of Pediatricians states, "It is inaccurate and dangerous to include gender identity in a conversion therapy bill. Over 70,000 health professionals oppose laws that require affirming children's nontraditional gender identity without extensive assessment and exploration.ⁱ Research suggests that affirmation increases persistence,ⁱⁱ sending children down a path of dangerous hormones and surgeries that cause permanent sterility and other harms. Therapists must be allowed to investigate possible psychodynamic and social factors behind a young person's gender identity. Providing alternative ways to ease dysphoria in this context is not conversion therapy and must not be banned."

***Children with gender dysphoria (GD) believe they are not their biological sex.ⁱⁱⁱ**

***Gender identity is not inborn and can change over time due to many factors.^{iv}**

****As many as 88% of girls and up to 98% of boys outgrow GD by late adolescence w/ either watchful waiting or therapy that affirms biological sex.^v This bill criminalizes both approaches.***

***In the only study on record, 100% of children placed on puberty blockers claimed a transgender identity and went onto toxic cross-sex hormones. This suggests that "affirming therapy" and blockers inevitably lead to a transgender outcome and a lifetime of toxic medications instead of an over 85% acceptance of their sex by adulthood.^{vi}**

*** 100% of young children affirmed as the opposite sex, placed on puberty blockers followed by cross-sex hormones are permanently sterilized.^{vii}**

***Cross-sex hormones also carry a lifetime risk of potential side-effects: severe bone damage^{viii}, cardiac disease, stroke, diabetes, hypertension, cancers.^{ix}**
